

IN THE CLAIMS

Please replace pending claims 7 and 19 with amended claims 7 and 19 as follows:

7. (Twice Amended) A method for dynamically adjusting associated data values on a client computer, the method comprising:

transmitting a plurality of data packets comprising associated data values from a host computer to a remote client computer in response to an initial query by the client computer, the associated data values being a subset of available data on the host computer relating to the initial query;

automatically displaying a control module on a display monitor of the client computer;

dynamically adjusting the associated data values using the remote client to process the adjustment in response to user interaction with the automatically displayed control module; and

dynamically displaying the adjusted data values on the client display monitor.

19. (Once Amended) A method for dynamically adjusting pricing data displayed on a client computer, comprising:

transmitting a set of pricing data from a server computer to the client computer in response to an initial query from the client computer, wherein the pricing data relates to the initial query and is a portion of available data on the server computer;

transmitting a control module comprising a graphical user interface from the server computer to the client computer;

automatically displaying the graphical user interface on the client computer; and

dynamically displaying and adjusting the pricing data using the remote client to process the adjustment in response to user interaction with the automatically displayed graphical user interface.
